[Amd Turion 64 X2 Tl-60 Driver](#)

[6] It is designed to work with the RS780M chipset Given the above enhancements on the architecture, the cores were minimally modified and are based on the K8 instead of the K10 microarchitecture.. By adjusting frequency and voltage during use, the processor can adapt to different workloads and help reduce power consumption.

[1] The Turion 64 and Turion 64 X2/Ultra processors compete with Intel's mobile processors, initially the Pentium M and the Intel Core and Intel Core 2 processors.

Turion 64 X2[edit]AMD Turion 64 X2 engineering sample, 1 6 GHzTurion 64 X2 is AMD's 64-bitdual-coremobile CPU, intended to compete with Intel's Core and Core 2 CPUs.. 2 GHz to 2 6 GHz Model naming methodology[edit]The model naming scheme does not make it obvious how to compare one Turion with another, or even an Athlon 64.. The later in the alphabet that the second letter appears, the more the model has been designed for mobility (frugal power consumption).. It supports DDR2-800SO-DIMMs and features a DRAM prefetcher to improve performance and a mobile-enhanced northbridge (memory controller, HyperTransport controller, and crossbar switch).

amd turion ii n550 drivers

[5] It also implements multiple on-die thermal sensors through integrated SMBUS (SB-TSI) interface (replaces and eliminates the thermal monitor circuit chip through SMBUS in its predecessors) with additional MEMHOT signal sent from embedded controller to the processor, and reduces memory temperature.

what is the best amd driver

AMD Turion(tm) 64 X2 Mobile Technology TL-52 for Windows – software and hardware drivers.. Turion II[edit]Turion II is identical to Turion II Ultra, except that the Turion II features only 1 MB of L2 cache (512 KB per core), and lower clock speeds ranging from 2.. The Turion X2 Ultra is a dual-core processor fabricated on 65 nm technology using 300 mm SOI wafers.. Turion II Ultra[edit]Turion II Ultra (codenamed Caspian) is the mobile version of the K10.. The Turion X2 Ultra processor uses the same socket S1 as its predecessor, Turion 64 X2, but the pinout is different.. The Turion Ultra processor was released as part of the 'Puma' mobile platform in June 2008. d70b09c2d4
